

## Public Notice

Please be advised that Western Forest Products Inc.'s Mid Island Forest Operation will be conducting a pile burning program during October and November. This activity is carried out to increase the area where we can plant trees and to reduce the fire fuel hazard in logged areas in a controlled fashion. WFP is obligated to reduce the fuel hazard near the Sayward Fire Protection District by regulation.

The Open Burning Smoke Control Regulation prescribes conditions under which this pile burning may be carried out. It considers venting, wind direction, wood moisture content, and piling age. The management objective is to eliminate any noticeable impact to air quality from this pile burning program for the residents of Sayward.

If you have any concerns or questions, please contact the undersigned.
